As a subscriber, I feel I am entitled to receive the traffic and weather services that XM offers. With regular radio stations, you never know when the DJs are going to announce the traffic reports again and you may need the information right away. The National Association of Broadcasters should not be able to dictate what is heard on a subscription service. XM Satellite Radio offers many channels and styles of music you normally don't hear on commercial radio. I respectfully urge you to reject the NAB's petition 04-160 and to support XM to provide me with the kind of programming everyone deserves- music that the audience wants you to hear, not music that only the stations and corporations want you to hear. Sincerely,
Alicia Fry
